SYSTEM PORTAL · LOCAL WEB APP

USER GUIDE

Step-by-step: use the full website

Solo Leveling themed progression dashboard · Nutrition tools · Real data · Auth-gated

What's inside (≤ 5 pages)

- **Getting started:** localhost link/launcher, optional hostname, admin & local sign-in, navigation.
- **Dashboard modules:** Status, Quests, Vision, Advisor, Progress, Inventory — real progression.
- **Nutrition:** BMI & Diet Plan (exercises + themed PDF), Food Database, Meal Calculator with piece-wise entry (e.g. 2 eggs).
- **Extras:** themed 404 page with animations, tips/troubleshooting, quick reference.

Generated: 2026-11-14 · Login: http://localhost:8090/login.html · Admin: admin@system.local / AriseAdmin#2026

1. Getting started & sign-in

- **Open locally:** run **start-system-portal.bat** or `python -m http.server 8090` in the project folder, then open **http://localhost:8090/login.html**.
- **Friendly hostname (optional):** add `127.0.0.1 systemportal.local` to hosts (as Admin) and open **http://systemportal.local:8090**.
- **Admin login: admin@system.local** / **AriseAdmin#2026** (shown on login page).
- **Local account:** create account (name, email, password) and sign in. Progress saves per email in this browser (localStorage).
- **Google Sign-In (optional):** only if OAuth Client ID is set in `scripts/config.js` and origin authorized; otherwise use local/admin.
- **Navigation:** top menu — Home, Chapters, Dashboard, **Nutrition** (right of Dashboard). Sign out from user menu (top-right). Hard refresh: **Ctrl+F5**.

2. Home & Chapters

- **Home:** real snapshot — rank/level, active quest notice, HP/MP/EXP bars, module shortcuts. Data is derived from your activity (starts Level 1, Rank E).
- **Chapters:** Awakening, Extraction, Arise, Army — full-bleed animated sequences built from 270 website frames with themed motion.
- **404 page:** themed/animated **404.html** with quick links appears for missing routes (and can be opened directly).

3. Dashboard modules (real progression)

Status & Quests

- **Status:** Level/Rank/Gold/Fatigue/AP, HP/MP/EXP, stats (STR/AGI/VIT/INT/PER). Allocate available AP; values update from real activity.
- **Quests:** create timed quests (title, rank, minutes). Real countdowns; complete for rewards/XP, expiry applies penalties. History is real.

Vision & Advisor

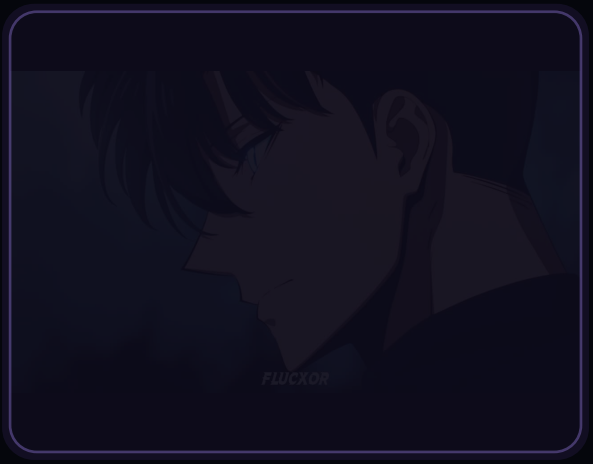

- **Vision:** allow camera, capture real check-ins (gallery). Add reminders with text/minutes (real timestamps). No fake analysis.
- **Advisor:** rule-based chat using your real level, XP, stats, streaks, active quests for guidance.

Progress & Inventory + notes

- **Progress:** before/after transformations with caption, author, explicit consent; stored locally per account in browser.
- **Inventory:** records and milestone skills unlocked from real quest counts, streaks, levels (locked items show requirements).
- **Data:** per-user state saved in browser localStorage for this device/site. Clearing site data resets local progress.

4. Nutrition tools (Nutrition menu, right of Dashboard)

- **BMI & Diet Plan:** enter age, sex, height, weight, activity, goal, diet preference → Calculate. Get BMI, healthy weight range, target weight, BMR/TDEE, target calories/macros, **exercise routine**, and **diet plan to follow**.
- **Diet PDF:** click “Download diet plan (PDF)” for a themed plan (needs internet/CDN for jsPDF). Countable items shown piece-wise where applicable.
- **Food Database:** Indian dishes, fruits, vegetables, grains/pulses, dairy/protein, nuts/seeds with **per-100 g reference** nutrients (kcal, protein, carbs, fat, fiber, Ca, Fe, vit A/C, folate, K). Search/filter; change grams; shows typical piece weight (e.g. 1 egg ≈ 50 g).
- **Meal Calculator (piece-wise fix):** name your meal, select ingredient, enter quantity — **pieces for countable items** (e.g. **2 eggs**, 3 rotis, 1 banana) or grams. Pieces auto-convert to grams; add items to see **total nutrients**. Remove/clear anytime.

Examples

- **Eggs (piece-wise):** select “Egg (boiled, whole) — 1 egg ≈ 50 g”, enter **2** → added as 2 eggs (100 g) with correct totals.
- **Potoler Dolma:** available in variants (fish-stuffed, prawn-stuffed, vegetarian) with per-100 g values and piece serving; searchable in Food DB/Meal Calculator.
- **Diet plan:** sample meals may show “2 eggs (100 g)”, “2 rotis (80 g)” etc., with per-meal and daily totals.

5. Tips, limits & quick reference

- **Storage:** accounts/progress in browser localStorage (per device/browser). Clearing site data resets local data.
- **Refresh:** use **Ctrl+F5** after updates. **Camera:** Vision needs browser permission.
- **PDF:** diet plan download requires internet (CDN). **Server:** `python -m http.server 8090` then open login; change port if busy.
- **Nutrition/health:** values are standard reference estimates per 100 g / typical piece weights and vary by size/recipe/brand. BMI, BMR/TDEE, targets and plans are **general guidance, not medical advice** — consult a qualified professional for personalised care.

Quick reference

Feature	Where	What it does
Login	login.html	Admin/local/(optional) Google sign-in
Home & Chapters	Home, Chapters	Snapshot, 270-frame animated chapters
Status/Quests/Vision	Dashboard	Stats & AP, timed quests, camera/reminders
Advisor/Progress/Inventory	Dashboard	Rule-based guidance, transformations, unlocks
BMI & Diet Plan	Nutrition	BMI/BMR/TDEE, exercises, diet, themed PDF
Food Database	Nutrition	Per-100 g/custom grams, piece info, search
Meal Calculator	Nutrition	Piece-wise/grams ingredients, total nutrients
404	404.html	Themed animated not-found page
