System Portal — User Guide

Step-by-step guide to use the full website (Solo Leveling themed, local web app). Keep this for quick reference.

1. Getting started & sign-in

- **Open the site (localhost):** Start the local server and open **http://localhost:8090/login.html**. You can also double-click **start-system-portal.bat** in the project folder (it starts the server and opens the login page).
- **Friendly local name (optional):** To use **http://systemportal.local:8090**, add this line to `C:\Windows\System32\drivers\etc\hosts` (run Notepad as Administrator): `127.0.0.1 systemportal.local`. Save, then open the URL.
- **Admin login (built-in):** Email **admin@system.local**, Password **AriseAdmin#2026** (shown on the login page).
- **Local account:** On the login page, use “Create account” to register with your name, email, and password, then sign in. Progress is saved per signed-in email in this browser.
- **Google Sign-In (optional):** Works only if a Google OAuth Web Client ID is set in `scripts/config.js` and `http://localhost:8090` is an authorized origin. Otherwise use local/admin login.
- **Navigation:** Use the top menu — Home, Chapters, Dashboard, Nutrition. The Nutrition menu is just to the right of Dashboard. Sign out from the user menu (top-right).

2. Home & Chapters (story experience)

- **Home:** View your rank/level snapshot, active quest notice, HP/MP/EXP bars, story chapters, and module shortcuts. Data is real and derived from your activity (not fake).
- **Chapters (Awakening, Extraction, Arise, Army):** Open from the Chapters menu to view full-bleed animated frame sequences (270 frames) with themed visuals and motion.

3. Dashboard modules (real progression)

Status

- See Level, Rank, Gold, Fatigue, Ability Points (AP), HP/MP/EXP, and stats (STR/AGI/VIT/INT/PER).
- Allocate available AP to stats and use reset/options provided. Values update from real quests/activity (starts at Level 1, Rank E, base stats 10).

Quests

- Create timed quests with title, rank, and duration (minutes). Countdown runs in real wall-clock time.
- Complete quests before expiry to earn rewards/XP/progress; expired quests apply penalties as designed. History shows your real outcomes.

Vision (camera & reminders)

- Start camera (allow browser permission), capture real check-in photos, and review them in the gallery. No fake analysis.
- Add reminders with text and minutes; they trigger based on real timestamps while the app is in use.

3. Dashboard modules (continued)

Advisor

- Chat with the rule-based advisor. It responds using your real state (level, XP, stats, streaks, active quests) — not external AI.
- Ask for guidance on quests, progress, or what to do next based on your current status.

Progress (transformations)

- Create transformation entries with before/after images, caption, author, and explicit permission/consent.
- Entries are stored locally for your account/session context in this browser.

Inventory

- View progress records and milestone skills/items unlocked from real quest counts, streaks, and levels.
- Locked items show requirements; they unlock automatically as you progress.

4. Nutrition tools (new pages)

BMI & Diet Plan (Nutrition → BMI & Diet Plan)

- **Step 1:** Enter age, sex, height (cm), weight (kg), activity level, goal (lose/maintain/gain), and diet preference (veg/non-veg).
- **Step 2:** Click “Calculate BMI & generate plan”. The app computes BMI, healthy weight range, suggested target weight, BMR (Mifflin–St Jeor), TDEE, target calories, and macros.
- **Step 3:** Review the generated **exercise routine** and **sample diet plan to follow** (meals with quantities; countable items shown piece-wise where applicable).
- **Step 4:** Click **“Download diet plan (PDF)”** to save a themed PDF. Note: PDF download needs internet (loads jsPDF from CDN).

Food Database (Nutrition → Food Database)

- Browse Indian dishes, fruits, vegetables, grains/pulses, dairy/protein, and nuts/seeds with **standard reference nutrition per 100 g** (calories, protein, carbs, fat, fiber, calcium, iron, vitamins A/C, folate, potassium).
- Search and filter by category. Change **Amount (grams)** to see calculated values for any quantity.
- Countable items show typical piece weight (e.g. 1 egg ≈ 50 g, 1 roti ≈ 40 g) to help convert pieces to grams.

Meal Calculator (Nutrition → Meal Calculator)

- **Step 1:** (Optional) Enter what you are making (dish/meal name).
- **Step 2:** Search and select an ingredient from the database.
- **Step 3:** Enter quantity — **piece-wise for countable items** (e.g. 2 eggs, 3 rotis, 1 banana) or grams for others. The app converts pieces to grams automatically using standard piece weights.
- **Step 4:** Click “Add ingredient”. Repeat for all items, then view **total nutrition** (calories, macros, vitamins, minerals). Remove items or clear all as needed.

5. Tips, limits & troubleshooting

- **Data storage:** Accounts and per-user progress are stored in your browser (localStorage) for this site on this device/browser. Clearing site data or using another browser/device will reset local data.
- **Hard refresh:** If updates don't appear, press **Ctrl+F5** to reload latest scripts/pages.
- **Camera/permissions:** Vision requires browser camera permission. Use a supported browser and allow access when prompted.
- **PDF downloads:** Diet plan PDF uses an online library (CDN), so an internet connection is required at download time.
- **404 page:** If you open a missing route, **404.html** provides a themed "not found" page with quick links back to key sections.
- **Nutrition accuracy:** Food values are standard reference estimates per 100 g / typical piece weights and vary by brand, recipe, ripeness, and cooking. BMI/BMR/TDEE/targets and plans are general guidance, not medical advice; consult a qualified professional for personalised care.
- **Server not opening:** Ensure Python is installed. From the project folder run `python -m http.server 8090`, then open **http://localhost:8090/login.html**. If port 8090 is busy, use another port (e.g. 8091) and open that port in the browser.

Quick reference

Page / Feature	Where to find it	What it does
Login & accounts	login.html	Admin/local/optional Google sign-in
Home & Chapters	Home, Chapters menu	Dashboard snapshot, animated story chapters
Status / Quests	Dashboard menu	Stats/AP/HP-MP-EXP; timed quests & rewards
Vision / Advisor	Dashboard menu	Camera check-ins & reminders; rule-based guidance
Progress / Inventory	Dashboard menu	Transformations feed; unlocked records/skills
BMI & Diet Plan	Nutrition menu	BMI, exercises, diet plan, themed PDF download
Food Database	Nutrition menu	Per-100 g & custom grams, piece info, search/filter
Meal Calculator	Nutrition menu	Piece-wise/gram ingredients, total nutrients
